TECHNICAL SKILLS

Frontend

- React.js
- TypeScript
- JavaScript (ES6+)
- Vite
- React Query
- Tailwind
- HTML5
- CSS3

Backend

- Node.js
- Express.js
- REST APIs
- JWT
- RBAC
- Socket.IO
- Puppeteer

Database

- PostgreSQL
- Prisma
- MongoDB

Tools & Practices

- Git
- SVN
- Docker
- Multi-tenant SaaS
- Automated tests

AI-Assisted Dev

- Claude Code — daily pair-programming

CERTIFICATIONS & TRAINING

Web Development Training Program

Wayz Consulting — Jan 2022 (7-day intensive)

EDUCATION

BS Computer Science

Sir Syed University of Engineering & Technology, Karachi
2018

STRENGTHS

- Problem Solving
- Teamwork
- Communication
- Quick Learner

PROFESSIONAL SUMMARY

Full-stack developer specialising in **healthcare / EHR SaaS** — building HIPAA-aware, multi-tenant platforms with React, TypeScript, Node.js and PostgreSQL. I work in an **AI-augmented workflow** (daily pair-programming with Claude Code), shipping reviewed, well-documented, production-ready features with clear root-cause analysis and test output for every change. A self-taught foundation (2022) that has grown into professional healthcare product engineering.

EXPERIENCE

niXaam LLC — React Developer

April 2026 – Present

- Multi-tenant healthcare SaaS — EHR, patient management & clinic operations (doctor, patient, admin, branch, staff portals)
- Built role-based portals in React + TypeScript with server-side **RBAC**.
 - Designed a per-branch WYSIWYG **PDF report engine** (Puppeteer + pdfme) — multi-page pagination, headers/footers, watermarks and signatures.
 - Delivered global-username + role-scoped-email authentication (PostgreSQL triggers, advisory locks).
 - Cut clinical **PDF generation from ~30s to ~1s** by unifying documents onto a single PDF service.
 - Pair daily with Claude Code — feature scoping, refactors, migrations and code review — shipping reviewed commits.

Self-Taught Full-Stack Developer — Independent Projects

2022 – 2025

Transitioned into software engineering through self-directed study and hands-on building

- Built full-stack apps: **JWT/bcrypt authentication systems**, REST API integrations, and multiple React SPAs (state management, forms & validation, API-driven UIs).
- Completed a Development Training Program (Wayz Consulting, Jan 2022).
- Progressed from foundational projects into production-grade healthcare systems.

KEY PROJECTS

XEHR — Electronic Health Records Platform

React · TypeScript · Node · Express · PostgreSQL · Puppeteer

Full EHR with multi-role portals (Doctor, Patient, Admin, Branch, Staff, Frontdesk), a telehealth console with AI-assisted drafts, a unified PDF template engine, envelope-encrypted records, MFA and audit logging.

PMS — Patient Management System

React · TypeScript · Node.js · Prisma · PostgreSQL

Clinic system: patient registration, prescription workflow, medicine↔disease mapping, PDF/print prescriptions, ShipRocket shipment integration and follow-up reminders — with role-based access and reporting.

ECW — eClinicalWorks Integration

Python · Node.js · PostgreSQL · Docker

Production-hardened bot ingesting patient, encounter and insurance data into a multi-tenant Postgres store — per-clinic credentials, cron scheduling, resumable runs, retry with backoff and failure alerting.
